

EDM SPECIALTIES

A Division of Scan Systems Corp

EDM NOTCH MASTER™ **Versatile and Portable**

Scan Systems Corporation, through its operating division of EDM SPECIALTIES, manufactures the family of portable EDM Notch Master™. Originally designed as the answer to producing flaws on the inside diameter of pipe, the scope of the equipment has enlarged. Continuous improvements have made the EDM Notch Master™ valuable to any industry that is required to make calibration standards. Not just limited to pipe, the Notch Master™ is used for coiled metal products, forged products, specialty metal products, and manufacturing processes.

The Notch Master™ was designed with ease of portability in mind. It can be operated with available electric supply or a generator. It can be used as a stationary piece of lab equipment or transported around a plant or pipe yard to be used on location. The standard tooling and supplies are packaged in an industrial carry case. The Notch Master™ power supply, controls, and EDM oil reservoir with pumps are dolly mounted on pneumatic wheels. It can be transported easily by motor vehicle to more remote locations .
