

EDM SPECIALTIES

A Division of Scan Systems Corp

EDM NOTCH MASTER™ **EDM Calibration Notches**

Scan Systems Corporation, through its operating division of EDM SPECIALTIES, manufactures the family of portable EDM Notch Master™. Originally designed as the answer to producing flaws on the inside diameter of pipe, the scope of the equipment has enlarged. Continuous improvements have made the EDM Notch Master™ valuable to any industry that is required to make calibration standards. Not just limited to pipe, the Notch Master™ is used for coiled metal products, forged products, specialty metal products, and manufacturing processes.

EDM Calibration Notches are the standards used by many industries to calibrate inspection equipment. The EDM Notch Master™ was the first portable EDM unit offered for these requirements. Companies that need to prove-up production to written industry standards such as ASNT, ASTM, API, AWS, and private corporate written standards use the EDM Notch Master™. The versatile range of the EDM Notch Master™ allows the operators to use electrodes as narrow as .010" thick to areas larger than 4".
