## **EDM NOTCH MASTER™ Standard Tooling**

Scan Systems Corporation, through its operating division of EDM SPECIALTIES, manufactures the family of portable EDM Notch Master™. Originally designed as the answer to producing flaws on the inside diameter of pipe, the scope of the equipment has enlarged. Continuous improvements have made the EDM Notch Master™ valuable to any industry that is required to make calibration standards. Not just limited to pipe, the Notch Master™ is used for coiled metal products, forged products, specialty metal products, and manufacturing processes.

Our standard tooling delivered with each Notch Master™ provides operators with a wide range of fabricated flaw options. Notches as narrow as .010" to wall reductions as large as 4" in area are manufactured with the same tool. Standard tooling is designed to fit inside diameter of pipe as small as 2" with no outside diameter limitations.
