A Division of Scan Systems Corp

EDM NOTCH MASTER™ Custom Tooling

Scan Systems Corporation, through its operating division of EDM SPECIALTIES, manufactures the family of portable EDM Notch Master™. Originally designed as the answer to producing flaws on the inside diameter of pipe, the scope of the equipment has enlarged. Continuous improvements have made the EDM Notch Master™ valuable to any industry that is required to make calibration standards. Not just limited to pipe, the Notch Master™ is used for coiled metal products, forged products, specialty metal products, and manufacturing processes.

Because our business is making calibration standards for the inspection world, we are regularly asked to develop new tooling and processes to make difficult EDM flaws. When we have developed this tooling for our own use, we then make it available to our Notch Master™ customers. Examples include the angle head above to EDM holes on the inside diameter of pipe up to 3 feet from the pipe end.
