

EDM SPECIALTIES

A Division of Scan Systems Corp

EDM NOTCH MASTER™ Optional Tooling

Scan Systems Corporation, through its operating division of EDM SPECIALTIES, manufactures the family of portable EDM Notch Master™. Originally designed as the answer to producing flaws on the inside diameter of pipe, the scope of the equipment has enlarged. Continuous improvements have made the EDM Notch Master™ valuable to any industry that is required to make calibration standards. Not just limited to pipe, the Notch Master™ is used for coiled metal products, forged products, specialty metal products, and manufacturing processes.

Continual product research and development have allowed us to bring to market a number of optional tools for our Notch Master™ equipment. The Mini-Tool™ is designed to EDM flaws in tubing with a diameter as small as 1". Other tooling allows the operator to EDM flaws in tubing with a diameter as small as 3/8" to outside diameter depths as deep as 1.75".
